SUMMARY

Software engineer and founder with 2+ years of freelance experience delivering frontend and full-stack work for businesses and agencies, combined with hands-on experience founding and shipping two live consumer apps as a solo builder. Comfortable owning a product end to end, from backend architecture and AI integration to App Store launch, growth, and iteration. Skilled at translating ambiguous requirements into working, production-ready software under real deadlines.

FOUNDER EXPERIENCE

Founder — *MyBabe AI*

2026 – Present

- Founded and built an AI companion app solo, from backend architecture to public launch on the App Store and Google Play.
- Designed and implemented the backend on Supabase (Postgres + edge functions), including auth sync, database schema, and a streaming chat engine.
- Integrated multiple AI models into a single product experience: Gemini 2.5 Flash for real-time chat with context caching, Gemini Live for voice calls via a self-hosted LiveKit + Python agent, Claude for asynchronous memory extraction, and OpenAI for voice generation.
- Diagnosed and resolved a prolonged Apple subscription review issue by rebuilding product IDs and subscription groups, unblocking monetization end to end.
- Owned App Store Optimization and localization, including keyword research, metadata rewrites, and multi-language chat support with automatic language detection.
- Built and managed the product from first user to first revenue with zero external funding or team, handling engineering, design, growth, and customer support personally.

Founder — *Iteminder*

2025 – Present

- Built a travel app that helps users avoid forgetting essential items before and during trips, live on the App Store and Google Play.
- Developed a white-label version for travel agencies on a token-based pricing model, and built the backend using Next.js, Prisma, Supabase/Postgres, and Better Auth.

FREELANCE EXPERIENCE

Freelance Frontend Developer — *Remote / Contract*

January 2024 – Present

- Developed and deployed fully responsive websites and web applications for multiple businesses and agencies using React, HTML, CSS, and Tailwind CSS.
- Collaborated directly with clients to scope requirements and translate them into interactive, production-ready user interfaces.
- Integrated third-party APIs and implemented UI state using React hooks and modern state management patterns.
- Used Git and GitHub for version control and collaborative development across client projects.
- Ensured cross-browser compatibility and optimized performance across a range of devices and screen sizes.

SKILLS & TOOLS

Languages & Frameworks: JavaScript (ES6+), React.js, React Native, HTML5, CSS3, Tailwind CSS, Node.js

Backend & Infrastructure: Supabase, Postgres, Prisma, Next.js, Edge Functions, Clerk, Better Auth, RevenueCat

AI & APIs: Gemini API, Claude API, OpenAI API, LiveKit, multi-model orchestration, prompt design, API integration

Tools & Practices: Git, GitHub, VS Code, Chrome DevTools, Netlify, Vercel, App Store Connect, Google Play Console, responsive design, debugging, ASO

EDUCATION

Frontend Web Development Bootcamp — Appclick Academy

Oyo State, Ibadan, Nigeria — 2025

Additional Learning: Udemy — The Complete JavaScript Course; self-directed study in React, Tailwind CSS, Git, and API integration
